

Ready to bring emerging talent onto your team?

Climate Corps is a bridge-to-career fellowship program of SEI that adds **cost-effective and mission-driven staff capacity** to municipalities, private industry, nonprofits, and academic institutions while helping emerging professionals gain a foothold in the climate sector.

How It Works

SEI tailors fellowship positions to Partner (host organization) needs and then recruits a diverse candidate pool for Partners to interview.

SEI serves as the employer (handling all payroll, health care, taxes, insurance, etc.) for Fellows who lead sustainability projects within Partner organizations.

SEI hosts a rigorous training program for all Fellows aligned to early-career competencies for sustainability professionals including equity, resilience, innovation, stewardship, and collaboration.

Fellows complete a 10-month (+/-) career-launching fellowship, driving sustainability projects forward with Partners while earning a monthly stipend, professional certificate, and program completion award.

85% of Fellows go on to pursue sustainability careers, many within Partner organizations.

By the Numbers

Since 2010:
